

APHASIA RESEARCH

A study is available for persons with aphasia

The Shirley Ryan AbilityLab is conducting a research study to collect ecological momentary assessment (EMA) data to understand how to best ask the persons with aphasia about their mood throughout their day.

If you should qualify, you will receive the following:

You will be asked to make a total of 1-3 visits (in-person or virtual)

You will also answer questions on your phone 4 times a day for 14 days.

Your smartphone data (e.g., step count, heart rate, geolocation) will be tracked on for 14 days.

For more information, please contact the Think + Speak Lab at 312-238-1235 or e-mail Eleanor Siegle at esiegle@sralab.org

Principal Investigator: Dr. Sameer Ashaie

IRB# STU00217329

Participants must meet the following criteria:

- Diagnosis of aphasia from a single stroke
- More than 6 months since stroke onset
- At least 18 years old
- English-speaking before the stroke
- Own a smartphone
 - OR
- Be a caregiver of person with aphasia

Participants will receive compensation.
